INDUSTRIAL

#### **The ratchet – the key item :**

Made from CrV steel in one single piece. Hardened and with perfect toothing: several of the 52 teeth engage simultaneously for transmitting extremely high torque.

Quick release mechanism: releasing sockets at the push of the button. Optimum surface protection: twice nickel plated then chromed in matt finish. Non-detachable handle made from oil and acid-resistant TPR (thermoplastic rubber) with practical hole for hanging up.

#### **The PROXXON driver system:**

The driving force is applied to the flanks, not the corners. This ensures high power transmission without damaging the corners of the nut or bolt.

#### **Screwdriver bits:**

With CrV socket ①.

The drive bits are all an optimum combination of chrome-silicon-manganese-molybdenum steel ②.

#### **All bits and accessories are forged using 31CrV steel.**

High carbon content to ensure consistent hardness. ③  
Deep, uniform forging is fully guaranteed on the hex. drive side ④  
to ensure that protruding studs do not present a problem. Thin-wall construction ⑤ for better access while maintaining strength for heavy work. Lead-in chamfer allows socket to slide over nuts easily. Machined fits on drive square ⑥ allow ratchet to arrest properly. Beginning with the 19mm size the outer diameter ⑦ of the sockets is reduced on the drive square end for improved handling ⑧.  
Optimum surface protection: Double nickel-plating and single matt-finished chrome-plating.

**DIN**  
**ISO**

#### **Quality at its best:**

Highest quality, exceeds DIN/ISO requirements for hardness and maximum torque. Individual size tolerances are all well within the prescribed norms.

**2 year guarantee**

For full professional use!

Sockets and drive elements carry an additional **25 year guarantee** against faulty material and workmanship.

Socket sizes easy to read due to laser marking!

**Forged of chromium-vanadium steel 31 CrV3. In sturdy powder-coated**

**steel cases. Proven 100,000-fold in workshops.**

For socket sets our test mechanics prefer steel cases: They are sturdy and preeminently compact – a lot of tools, clearly arranged, requiring small space.

A chart for threads from M 1.6 – M 24 with related tightening torque is durably fixed inside the lid.

With distortion-free, indestructible trays of injected POLYPROPYLENE. Oil and acid resistant and easy to clean. With easy-to-read and durable marking of all socket sizes!
